sub. a1

1. A system for providing a pilot with a display of primary flight instruments that can be viewed while the pilot's eyes are focused at infinity through the aircraft windshield, comprising:

a computer;
means for connecting the computer to an electronic flight instrument system data output port on the aircraft's instrument panel; and an eyeglass mounted, clip-on, display operative to receive the output of the computer, the computer being operative to process the information from the electronic flight instrument system outlet port into a single display which incorporates outputs from all of the principal flight instruments.
